

Myntra's Scale Makes a Small Wishlist-Conversion Gap Worth Hundreds of Crores

THE OPPORTUNITY, SIZED

TAM \$21B

India's fashion e-commerce market. *Outlook Business/Whalesbook, 2026 — Myntra ~30–35% share.*

SAM 24.5M

Myntra wishlist-active users per month. *Modeled — 35% of 70M MAU, market research case study.*

SOM ~15M

Active Comparers, 61% of wishlist-active users. *Wishlist Behavior Survey, n=36.*

India's online fashion sector grows at a 21.1% CAGR through 2030 — Myntra is its largest dedicated platform. (Whalesbook)

At this scale, a few percentage points of wishlist conversion is not a rounding error — it's real money already sitting on the platform:

Even the conservative scenario — a 5-point conversion lift — is modeled at ₹265 Cr in incremental annual revenue, ~12% of Myntra's entire FY25 net profit, with no new acquisition spend, because it monetizes demand already on the platform.

[Source: Myntra Market Research & Case Study \(Sept 2026\).](#)

The 30-Day Conversion Metric Hides Five Separate Failure Points

“% of users who purchase at least one wishlisted item within 30 days of adding it”

Constraint: no monetary incentives — discounts, coupons, and cashback are excluded as the primary lever.

A single number can't say where the item is lost:

A. Re-engagement

FOCUS

B. Uncertainty Resolution

C. Comparison Resolution

FOCUS

D. Decision Trigger

E. Purchase Completion

MVP FOCUS: Stage A → C. Fixing re-engagement and comparison resolution raises the ceiling on every downstream stage — not a returns or price fix.

[Live Review Analysis Agent → open ↗](#)

[Full decomposition: reports/metric_decomposition.md](#)

The Loudest Complaint in Reviews Isn't the Real Wishlist Blocker

How the AI discovery engine reached this ranking:

↓ -1,307 not real feedback (catalog copy / too short / ops-only) · -767 non-English, dialect, or emoji-only · -5,066 no quotable evidence span

Two rankings disagree on where to fix the funnel:

#1 BY RAW VOLUME

opp:returns_exchange

12.0% of relevant records (2,084) — hesitation-link 0.11, the LOWEST of the top 10.

App-store reviewers are disproportionately people who already bought and are complaining post-purchase.

#1 BY WISHLIST-RELEVANCE

opp:comparison_loop

Only 3.0% of relevant records (522) — hesitation-link 0.63, the HIGHEST of all 20 scored.

Low volume, but structurally the theme most tightly coupled to the actual wishlist-to-buy decision.

[Full register: reports/opportunity_register.md](#)

Survey and Interviews Agree: Shoppers Compare, Then They Forget

Why an item gets removed without ever being bought (n=36):

- Found a better alternative
- Price never dropped
- Lost interest / no longer needed
- Realized it wouldn't fit/suit
- Went out of stock

Source: Wishlist Behavior Survey — [view full responses](#). Top slice = the “42%” cited throughout this deck.

Illustrative personas (segment archetypes built from the survey + both interviews -- not additional respondents):

The Active Comparer

Converts when the comparison resolves in-app

- Small, curated wishlist
- Wishlists specifically to compare
- 61% of survey respondents show this motive

CONVERTER · SMALL, CURATED WISHLIST

Anjali

“I wanted to compare, shortlist and compare.” Wants a physical Try & Buy bundle to resolve fit doubt on unfamiliar brands.

NON-CONVERTER · 1,220-ITEM WISHLIST

Bhargavi

“I get bombarded with alerts... I end up ignoring them.” Wants AI-curated wishlist surfacing, not a comparison tool.

[Full findings: reports/interview_findings.md](#)

The Serial Bookmarker

One wishlist, many intents -- mostly passive

- Wishlist in the hundreds to thousands
- Active Comparer for one item at a time
- Notification-fatigued at scale (interview)

Active Comparers Don't Say No — They Just Never Decide

“Active Comparers” — users who wishlist an item while still comparing it against alternatives. The largest, most consistent segment across the AI pipeline, the survey, and both interviews (61% comparison motive) — confirmed as a per-item state, not a fixed user trait.

Root cause

The wishlist is a passive bookmark, not a decision workspace.

Result

Resolves off-platform (42%) or never at all (32% forget).

Why it matters

Not price or returns — decision support, no incentive needed.

RICE prioritization — same Frequency / Hesitation-link / Evidence-confidence columns already published in reports/opportunity_register.md, plus a labeled engineering-effort estimate. This reinforces, not revises, the funnel ranking:

Opportunity	Reach	Impact	Confid.	Effort	RICE
Comparison Resolution	3.0%	0.63	0.78	Low	1.49
Re-engagement (forgetting)	5.1%	0.50	0.63	Med	0.82
Fit Confidence	12.3%	0.24	0.44	Med	0.65
Visual/Review Proof	11.6%	0.27	0.61	High	0.63
Returns/Exchange Friction	12.0%	0.11	0.81	High	0.35

Reach = % of relevant records · Impact = hesitation-link · Confidence = evidence_confidence · Effort is a planning estimate (not published elsewhere) · RICE = (Reach×Impact×Confidence)/Effort-weight

Four Validated Hypotheses, One Mechanism That Resolves Them

1

Comparison Resolution

opp:comparison_loop · hesitation-link 0.63

Why “TieBreaker” fits: the AI agent resolves the exact comparison respondents described unprompted, in-app instead of on a competitor's site.

2

Re-engagement (forgetting)

opp:intent:uncertain · hesitation-link 0.50

Why “TieBreaker” fits: the fast-forward nudge pulls a stale comparison back before attention decays — the #1 blocker among non-converters.

3

Visual / Review Proof

opp:image_vs_reality · hesitation-link 0.27

Why “TieBreaker” fits: the comparison card surfaces the same structured product detail respondents said they lacked, without leaving the app.

4

Fit Confidence

opp:fit_uncertainty · hesitation-link 0.24

Why “TieBreaker” fits: the agent reasons directly over each item's size/fit notes — precisely the unfamiliar-brand uncertainty both interviews described.

ALTERNATIVES CONSIDERED AND REJECTED (reports/solution_concepts.md)

Recoverability preview

Hesitation-link 0.11 — post-purchase noise.

Worth-it proof at current price

Reads as monetary framing — against our constraint.

Delivery date on SKU

Evidence base only 0.82% — logistics only.

The moat: every reason-tagged comparison feeds back into the dataset — at Myntra's scale (200M+ annual active users), that compounds faster than a smaller rival can replicate the same structured signal.

TieBreaker: An AI Agent That Resolves the Comparison In-App

A standalone Streamlit app on the real Myntra catalog (451 in-stock items, 4 categories) and the same LLM client as the discovery pipeline — no mock data.

How a comparison gets resolved, end to end:

[Live MVP \("TieBreaker"\)](#) → [open ↗](#)

From Browse to Decision in Four Steps

Every step is a real Streamlit widget wired to session state and the live LLM agent — nothing here is a mockup.

Comparison Resolution Rate Rises Only if Every Guardrail Holds

Primary: $\text{resolved} \div (\text{resolved} + \text{still-cold})$

LEADING INDICATORS

- Reason-capture rate
- Nudge-to-engagement rate
- “Help me decide” invocation rate
- Recommendation-acceptance rate

GUARDRAILS (metrics that pause rollout on breach)

- Wishlist add rate (must hold)
- Add-flow abandonment rate
- Regretted-removal rate
- Agent failure rate
- Monetary-language leakage (0%)

[Full metrics: reports/define_success.md](#)

CRITICAL RISKS THESE GUARDRAILS WATCH (4 of 11)

Correlation, not causation

Mitigation: primary metric framed as a hypothesis-linked proxy, gated by a real A/B test.

Reason-tag friction shrinks the funnel

Guardrail: wishlist add rate must hold steady or grow.

Agent steers a bad decision

Guardrail: regretted-removal rate.

Monetary-language leakage

Guardrail: automated scan, target 0%.

[Full risk register \(11 total\): reports/risks_and_mitigation.md](#)

Closing This Gap Is Worth ₹265–688 Crore a Year

SCENARIO	CONVERSION LIFT	INCR. ANNUAL GMV	INCR. REVENUE	INCR. PROFIT
Conservative	12% → 17% (+5pp)	₹2,205 Cr	₹265 Cr	₹66 Cr
Moderate	12% → 20% (+8pp)	₹3,528 Cr	₹423 Cr	₹106 Cr
Aggressive	12% → 25% (+13pp)	₹5,733 Cr	₹688 Cr	₹172 Cr

Even the conservative scenario (+5pp) is ~4.4% of Myntra's entire FY25 revenue and ~12% of its FY25 net profit — at a higher margin than average, since it monetizes demand already on the platform. Modeled estimate on labeled assumptions, not a Myntra-disclosed figure.

5 of the 11 identified risks already have a guardrail or leading-indicator metric watching for them — designed against these exact failure modes, not in a vacuum.

PATH TO SCALE

1 · Pilot

Ready-to-test experiments as scoped prototypes. *Gate: directional lift, 0% leakage.*

2 · Validate

Powered 30-day A/B on real conversion. *Gate: significant lift, guardrails hold.*

3 · Scale

Public deployment + mechanism-preference signal. *Gate: north star trending up, base-wide.*
